

Cruzora Physician Solutions

Summary of Services

Physician Life Care Plans: Dr. Pittman is a Certified and Registered Life Care Planner. Life care plans are typically used for catastrophic and non-catastrophic injuries. All life care plans are first authored reports. We do not use commercial templates to write our life care plans. We have seen significant errors with basic information and cost projections with these products. We meet with the client, medical providers, conduct a home visit to determine equipment and medical needs. As physicians, we consider all factors which may be included in the life care plan. This report includes medical cost projections. The ability to project medical costs is dependent upon knowledge of medical diagnoses and potential complications across a spectrum. Clients who have sustained a catastrophic injury can have medical costs that may last a lifetime. It is vital to have a thorough understanding of this process to ensure credible and defensible reports.

Comprehensive Medical Summary and Personal Injury Report: This report provides a complete medical summary with detailed events. As physicians, we can easily interact with the medical community to form objective opinions and conclusions. We include introduction, records reviewed, history of events, ongoing medical issues, medical analysis, causation, mechanism of injury, functional loss, future medical care costs, summary, conclusion, and opinion. This report paints a powerful picture of all relevant factors and can be effectively used for litigation purposes. We interact with your client, consult with treatment providers, determine significant factors, and ensure all relevant details are evaluated.

Life Expectancy: This report is typically used by insurance agencies and attorneys to determine the expectation of remaining living years. This has broad implications with determining cost projections. We do not simply regurgitate data from the CDC (Centers for Disease Control and Prevention) or other life expectancy tables. Life expectancy is impacted by chronic diseases, genetic factors, lifestyle activity, compliance with current medical care, and other unique risk characteristics. These factors may significantly impact estimated life expectancy and subsequent cost to medical services.

IME Observation/Rebuttal: Having physician presence at the independent medical examination can be exceptionally powerful. I attend the medical examination and author a separate independent report, taking note of discrepancies, supply additional details that may not have been known to examiner.

Litigation Support: Liaison services including communication with medical providers, complex medical case reviews, medical literature research, develop medical legal theories, question preparation, expert witness referral, standard of care reviews, merit/case validity reviews, determination of required medical services, medical cost projections, medical file reviews, answers to specific medical questions, causation analysis, and medical needs for estate planning. As physicians, we can provide a more in-depth level of exploration, and communication and effectiveness.
